

our mission

We want to use existing expertise and financial support from Germany and Europe to bring about lasting improvements in the living conditions of the poorest people in developing countries.

our partner org. RUPSA during the distribution of facemasks as part of our Covid-19 Prevention Initiative

our goals

We have set ourselves the goal of perceiving local problems in particularly vulnerable regions of the earth as a challenge. With our experience and knowledge we would like to develop new measures to ensure humane living conditions in the long term and for all.

our partner

We have established partnerships with several NGOs in South Asia, with whom we are working together to address global challenges.

who we are

Our non-profit organisation „Association for Sustainable Community Enacted Development e.V.“, or simply ASCEND e.V., was founded in 2016 in Hanover by a group of people with very different nationalities, cultural, and professional backgrounds.

We are a team of environmental scientists, engineers, and people interested in and committed to the environment, from a wide range of professions, both international and multicultural; but in particular, we are a group of highly motivated people who are enthusiastic about improving the quality of environmental life conditions for all people on this earth.

ASCEND

Decent and fair living conditions?

We believe that this is possible.
For everyone. Anywhere in the world.

We want to tackle these
global challenges together!

what we are doing

menstrual hygiene initiative (MHI)

Our educational initiative aims to improve the health care of women and girls in Banishanta, Bangladesh, through the sustainable supply of menstrual hygiene products and the dissemination of basic knowledge about menstrual hygiene.

Workshop on menstrual hygiene education as part of our Menstrual Hygiene Initiative

For this purpose a production facility with sewing machines for the production of inexpensive, reusable sanitary towels has been set up and seamstresses were trained for the production of fabric sanitary towels. In addition, educational workshops and training courses were held to inform schoolgirls about the use of the sanitary pads.

Insight into the Covid-19 Prevention Initiative

covid-19 prevention initiative (CPI)

As a preventive measure against the spread of the COVID-19 virus in Dacope, Bangladesh, we have launched this initiative for the production of facemasks.

During the Covid-19 pandemic, trained seamstresses produced masks in the sewing facility built as part of the MHI. Along with soaps and educational leaflets, these facemasks were distributed free of charge to people of the vulnerable population groups in the slums of Dacopes.

what we are planning

JAGORAN

The aim of our latest project is to restructure a girls college in Bajua, Bangladesh - with innovative water and waste systems and new washrooms. In addition, we would like to provide education on menstrual hygiene and ensure the supply of sanitary pads for the girls.

JAGORAN thus combines the experience we have gained in our previous activities. In addition, the project is to be carried out with the involvement of the girls living there in order to give them the opportunity to participate in shaping the project.

Girls' homes in the college, which is the focus of our new project JAGORAN
